Instruction

SCIENCE INSTRUCTION

The School Board believes that science education should give students an understanding of key scientific concepts and a capacity for scientific ways of thinking. Students should become familiar with the natural world and aware of ways in which science, mathematics and technology depend upon one another.

The Board expects that students shall come to know that science, mathematics and technology are human enterprises, with strengths and limitations. As part of their science instruction, students should learn how to use scientific knowledge and ways of thinking for individual and social purposes.
