John-

Here are some projects that may help improve our energy efficiency and carbon footprint:

- Heating controls at KGH, upgrade from pneumatic to direct digital control.

- Install air dampers, at SHS and BES, that resist corrosion. Specifically for supply air, and return air.

- LED lighting to replace all remaining HID (high intensity discharge) lights. Either LED retrofit lamps or LED fixtures.
  - Soffit and playground lights at KGH
  - Entry way lights at BMS
  - Parking lot lights at SHS, PAC, KGH, BES
  - Exterior lights at PAC

- LED lighting to replace fluorescent light (specifically T8, and compact fluorescent) district wide. Either retrofit LED lamps or LED fixtures.
